

South Carolina Maternal and Child Health Data Book 2001

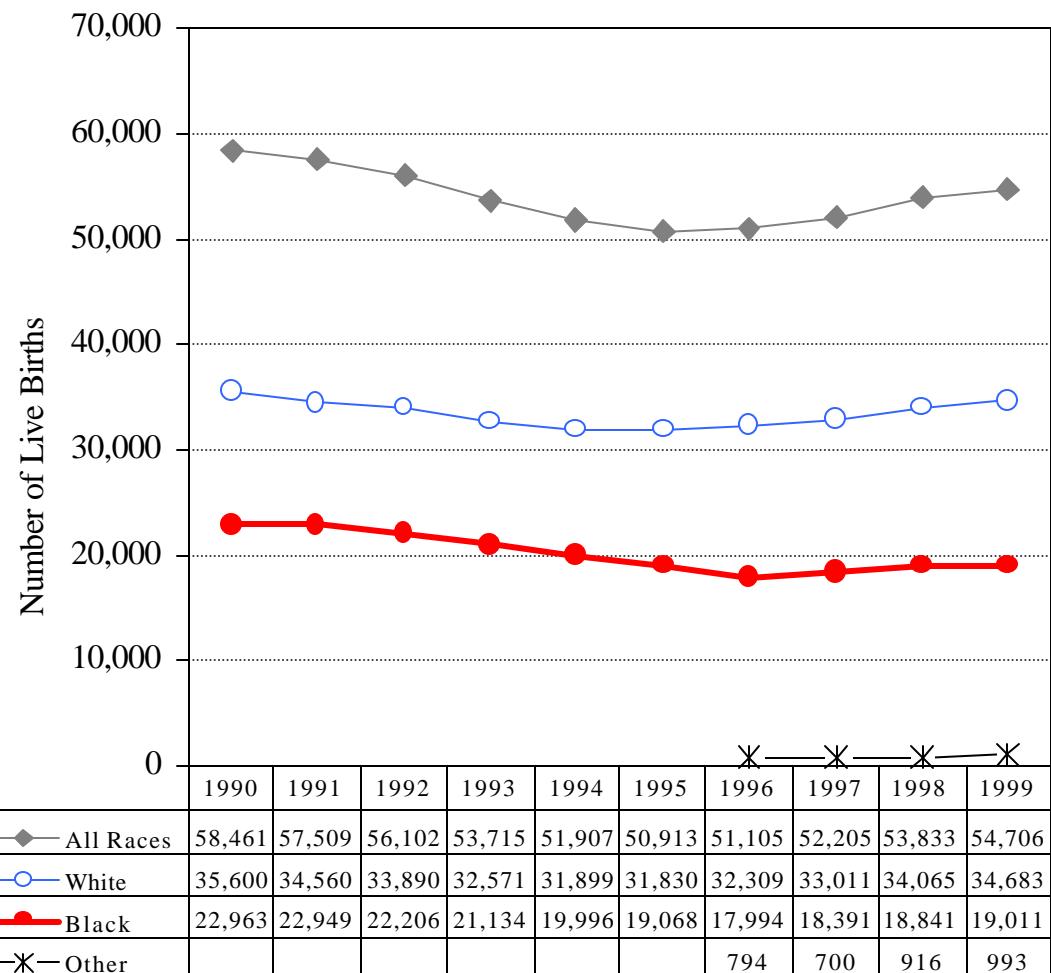

Technical Report Series 2000-03
January, 2001

- There has been an overall decreasing trend in the number of live births to South Carolinians from 1990 to 1999. There were 58,461 live births in 1990 and 54,706 in 1999, representing a 6.4% drop during this period. However, live births, in the state overall, began to increase in 1996 and the state has seen a 7% increase over the last four years.
- When reviewing live births by race/ethnicity, a decreasing trend is observed among all subgroups until 1996. White live births climbed by 9% from a low of 31,830 in 1995 up to 34,683 in 1999. Similarly, black live births increased by 5.7% from a low of 17,994 in 1996 to 19,011 in 1999. White live births have accounted for at least 60 percent of live births in SC each year, since 1990. Also, most of the recent increase in live births (1996-99) can be attributed to increasing White live births.

Annual Live Births

State of South Carolina

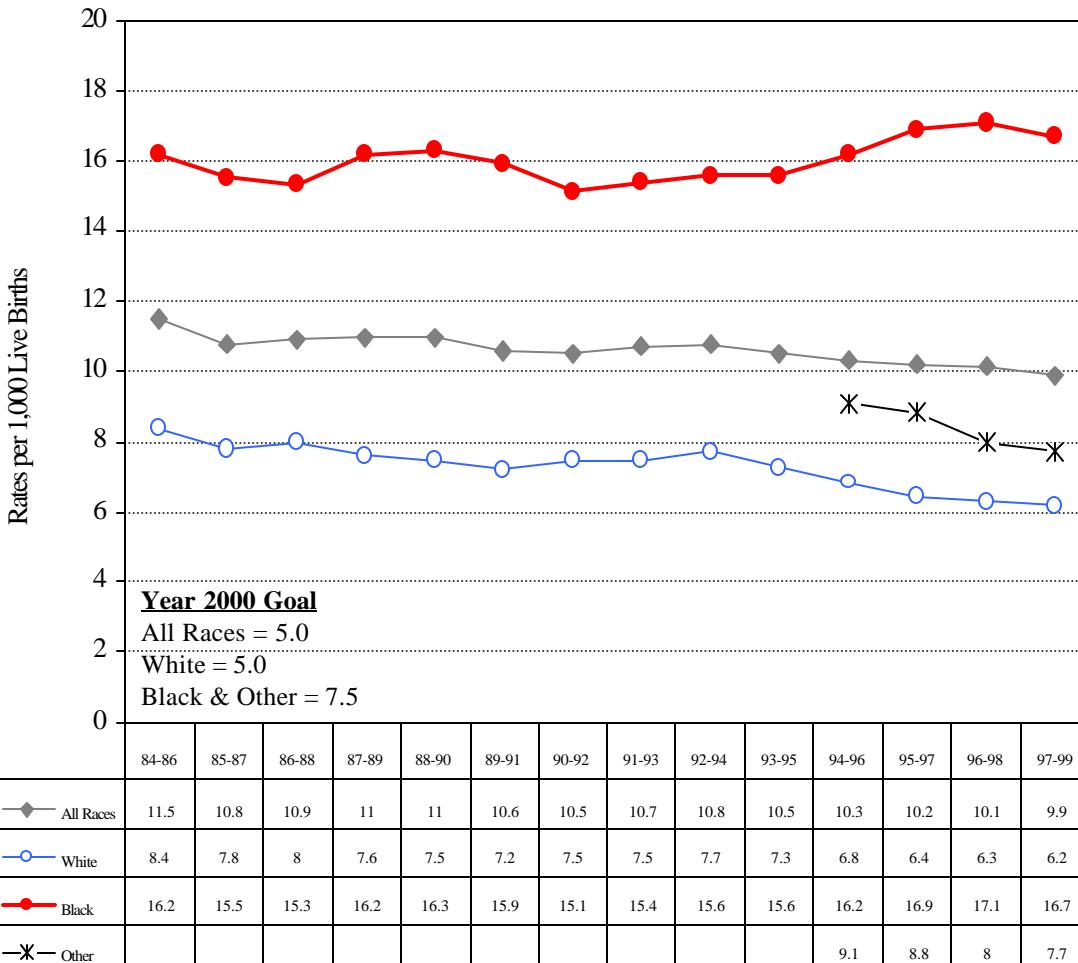

Note: The trend line labeled "Black" represents Black & Other races combined from 1990 -1995. In 1996, "Others" are counted, analyzed, and reported as a separate population subgroup. As a result, the trend line labeled "Black" represents the population subgroup "Black" only from 1996 - 1999.

Three Year Fetal Mortality Rates

State of South Carolina

- ▶ Fetal deaths in SC, overall, have decreased slowly and slightly from 11.5 deaths per 1,000 live births in 1984-86 to 9.9 in 1997-99. This decreasing trend has been consistent.
- ▶ When reviewing fetal deaths by population subgroups, a different picture emerges. White fetal death rates have declined from 8.4 deaths in 1984-86 to 6.2 in 1997-99 and this decline has been consistent and similar to the decreasing pattern for the state, overall. Death rates among Black and Others have declined from 16.2 in 1984-86 to 15.6 in 1993-95. This decline has not been consistent as has been for other subgroups. The rate for Blacks increased from 16.2 in 1994-96 to 17.1 in 1996-98 but has decreased to 16.7 in 1997-99. Fetal deaths involving Others declined from 9.1 in 1994-96 to 7.7 in 1997-99.

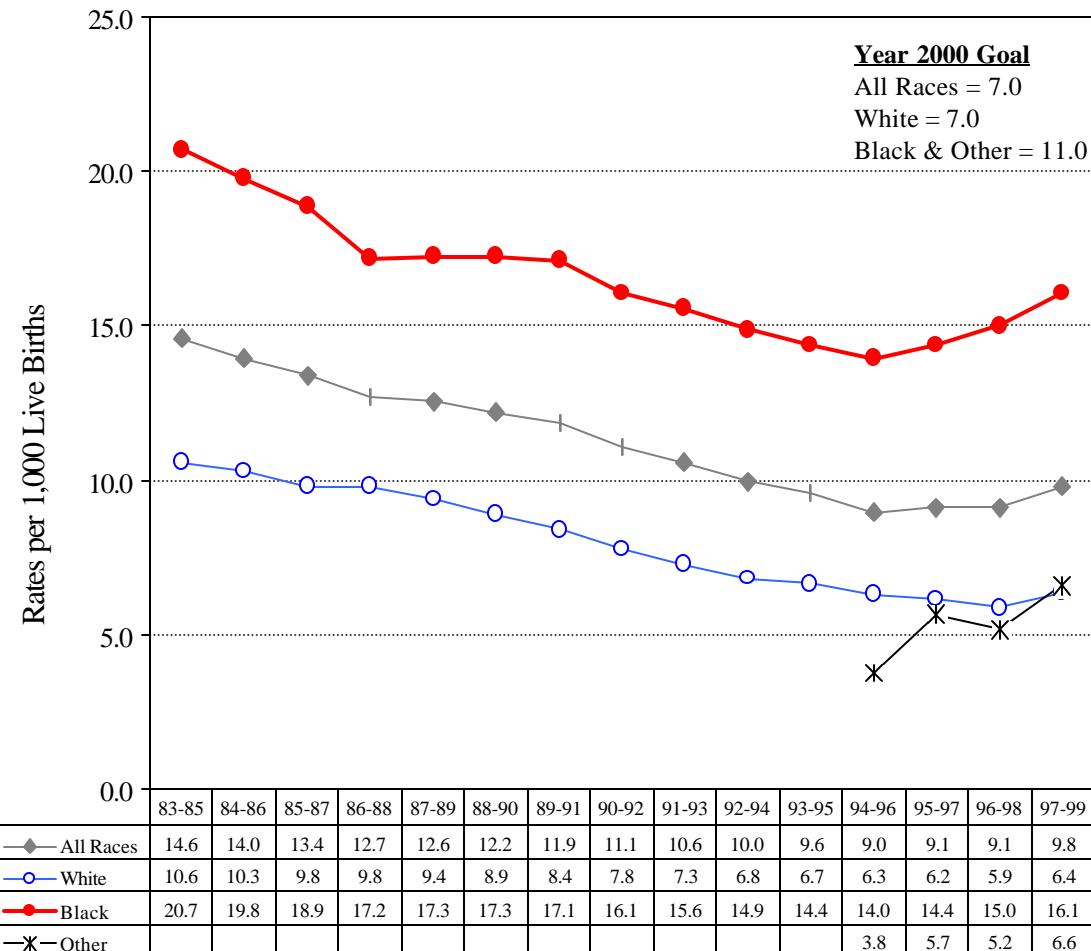

Note: The trend line labeled Black, represents Black & Others from 1983-85 to 1993-95. However, in 1994-96, Other races were analyzed separately, thus the trend line at this point represents only Blacks. Please see the new and separate line reflecting the new population subgroup - "Others" beginning in 1994-96.

Three Year Infant Mortality Rates

State of South Carolina

- Infant deaths in SC among all races have seen a 33.0% decline from a rate of 14.6 per 1,000 live births in 1983-85 to 9.8 in 1997-99. The longstanding declining trend began to increase in 1997-99. As a result, it appears that SC will not reach the US Healthy People Year 2000 objective of 7.0 infant deaths per 1,000 live births among all races.
- Infant deaths, when reviewed by race/ethnicity reveal differences. The death rate for white infants declined by 40.0% from 10.6 deaths per 1,000 live births in 1983-85 to 6.4 in 1997-99; this decline resembles the state's downward trend for all races. Death rates for Black and Others declined by 30.0% from 20.7 in 1983-85 to 14.4 in 1993-95. Black rates increased 13% from 1994-96 to 1997-99. Death rates for the subgroup, 'Other' climbed by 42% from 3.8 in 1994-96 to 6.6 in 1997-99.
- SC Whites have already reached the race specific Healthy People Year 2000 objective of 7.0 infant deaths per 1,000 live births. However, the Year 2000 objective of 11.0 deaths for Black and Others appears out of reach for SC.

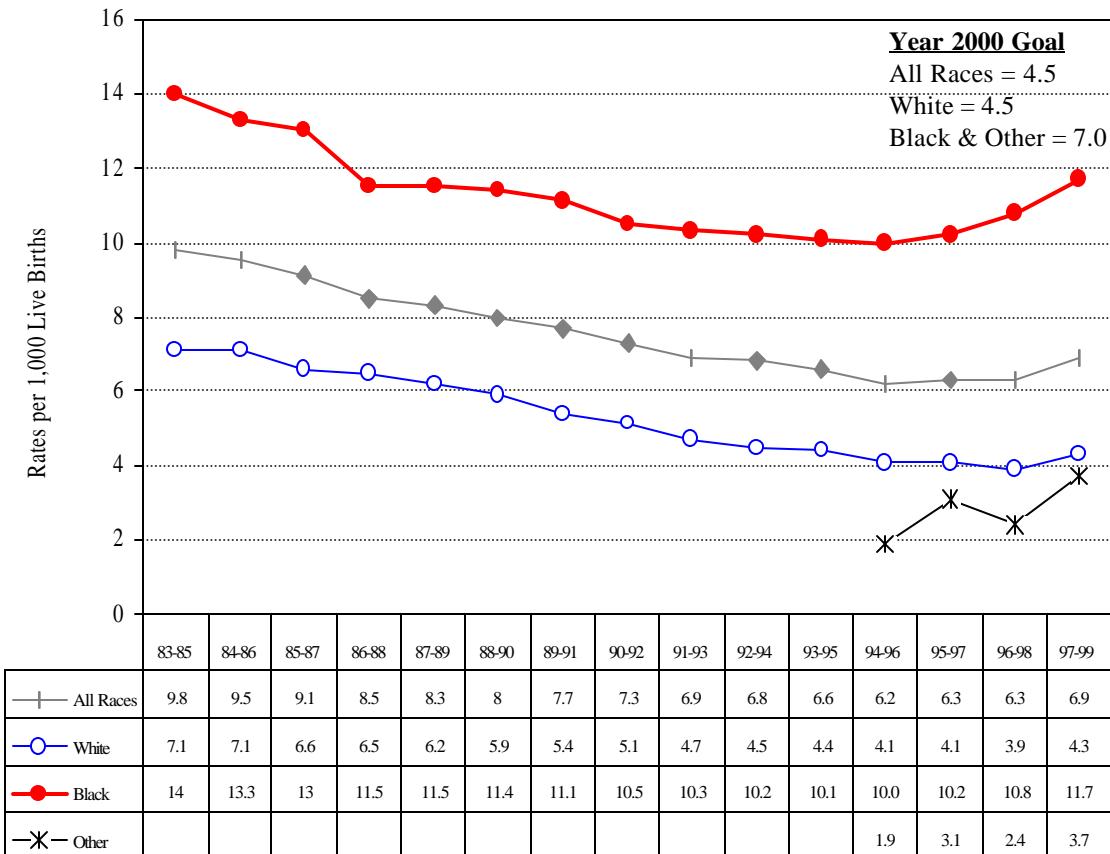

Note: The trend line labeled Black, represents Black & Others from 1983-85 to 1993-95. However, in 1994-96, Other races were analyzed separately, thus the trend line at this point represents only Blacks. Please see the new and separate line reflecting the new population subgroup - "Others" beginning in 1994-96.

Three Year Neonatal Mortality Rates

State of South Carolina

- Neonatal deaths among South Carolinians have decreased by 29.6% from 9.8 per 1,000 in 1983-85 to 6.9 in 1997-99.
- Neonatal deaths for Black and Others have declined by 28.0% from 14.0 deaths per 1,000 live births in 1983-85 to 10.2 deaths per 1,000 live births in 1993-95. The death rates for Whites have dropped by 39.4% from 7.1 in 1983-85 to 4.3 in 1997-99. The death rate for Blacks has increased 15% from 10.0 per 1000 live births in 1994-96 to 11.7 in 1997-99. The rate for Other has been fluctuating over the past four three year periods. This could be due to small numbers. The trend line for this group requires further observation.

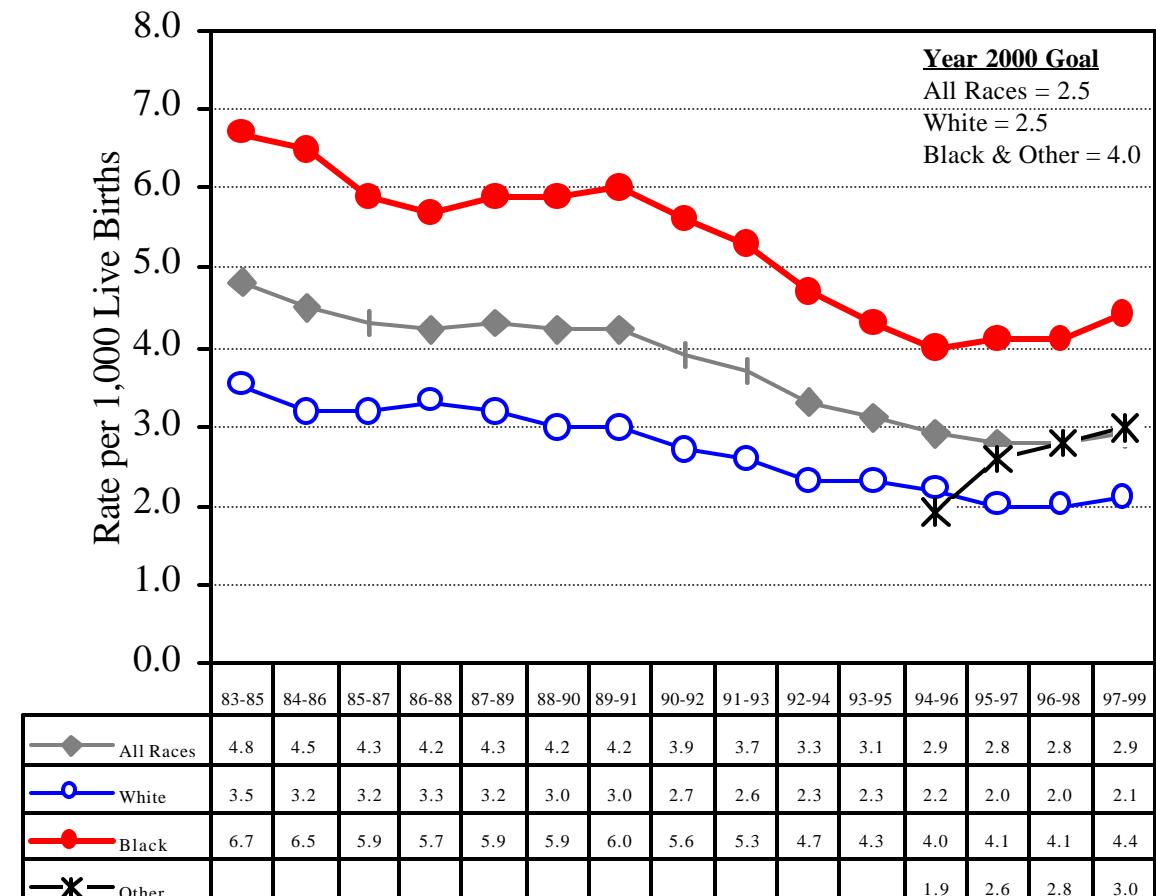

Note: The trend line labeled Black, represents Black & Others from 1983-85 to 1993-95. However, in 1994-96, Other races were analyzed separately, thus the trend line at this point represents only Blacks. Please see the new and separate line reflecting the new population subgroup - "Others" beginning in 1994-96.

Three Year Post-neonatal Mortality Rates

State of South Carolina

- ▶ The total post-neonatal deaths in SC have decreased during 1983-85 and 1997-99. In 1983-85 the death rate was 4.8 deaths per 1,000 live births and in 1997-99 the death rate had dropped to 2.9, a 40% decline.
- ▶ Similar success was seen from 1983-85 to 1993-95 for the population subgroups. In 1983-85, the death rate for Whites was 3.5 deaths per 1,000 live births and in 1997-99 the rate was 2.1, a 40% decline. The 1983-85 death rate for Black and Others was 6.7 and dropped to 4.3 in 1993-95 for a 36% decline.
- ▶ The rate for Blacks and Others when separated in 1994-96 show increases of 9% and 37% respectively.

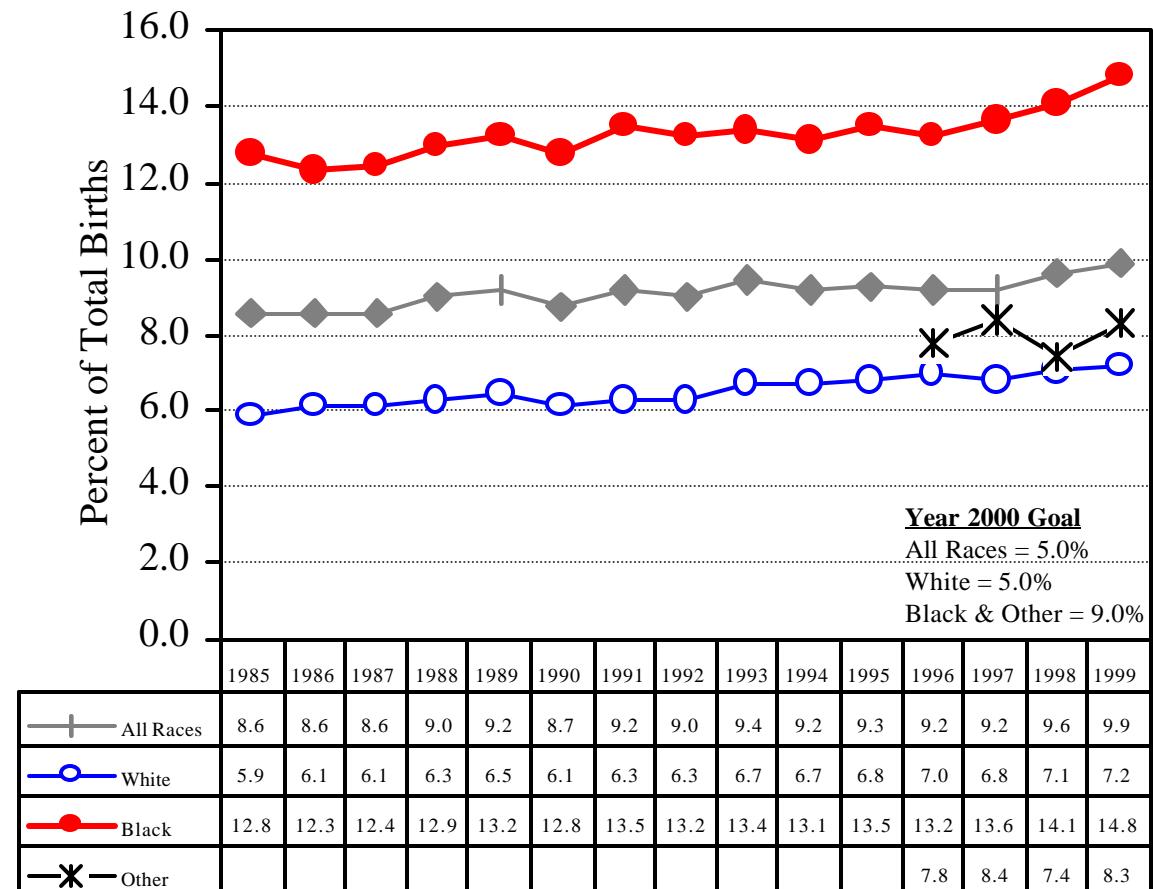

Note: The trend line labeled Black, represents Black & Others from 1983-85 to 1993-95. However, in 1994-96, Other races were analyzed separately, thus the trend line at this point represents only Blacks. Please see the new and separate line reflecting the new population subgroup - "Others" beginning in 1994-96.

Percent Low Birth Weight

State of South Carolina

- ▶ The percent of low weight births, in SC, has increased from 8.6% of all live births in 1985 to 9.9% in 1999, representing a 13% increase.
- ▶ Low weight births increased among Whites from 5.9% in 1985 to 7.2% in 1999, a 20% increase. ‘Black and Others’ low weight births increased from 12.8% in 1985 to 13.5% in 1995 and the overall trend leading to this 5% increase has been erratic. The trend for low weight births among Blacks reveal a consistent incline from 13.2 in 1996 to 14.8 in 1999. Low weight births among Others bounced from 7.8% in 1996, up to 8.4% in 1997, and back down to 7.4 in 1998 and up to 8.3 in 1999. However, the fluctuation may be due to small numbers and the trend for this subgroup requires further observation.

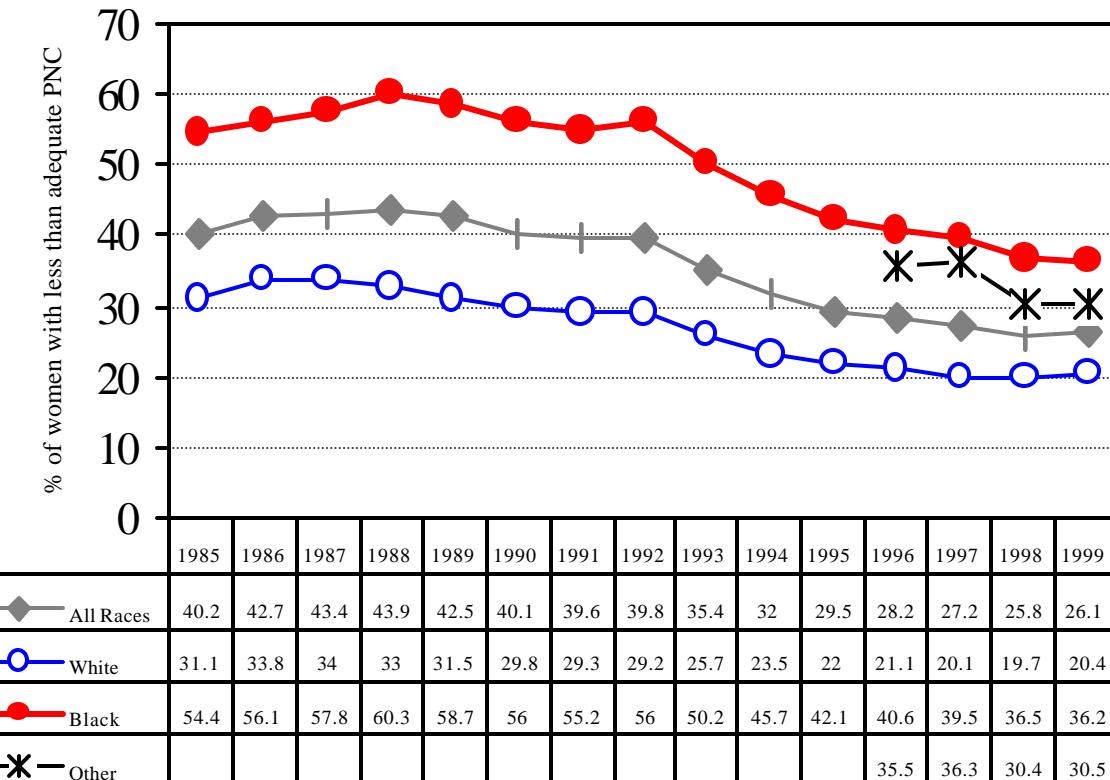

Note: The trend line for Black represents Black & Others from 1985 -1995. However, in 1996, Others are counted, analyzed, and reported as a separate population subgroup.

Percent of Women With Less Than Adequate Prenatal Care (Kessner Index)

State of South Carolina

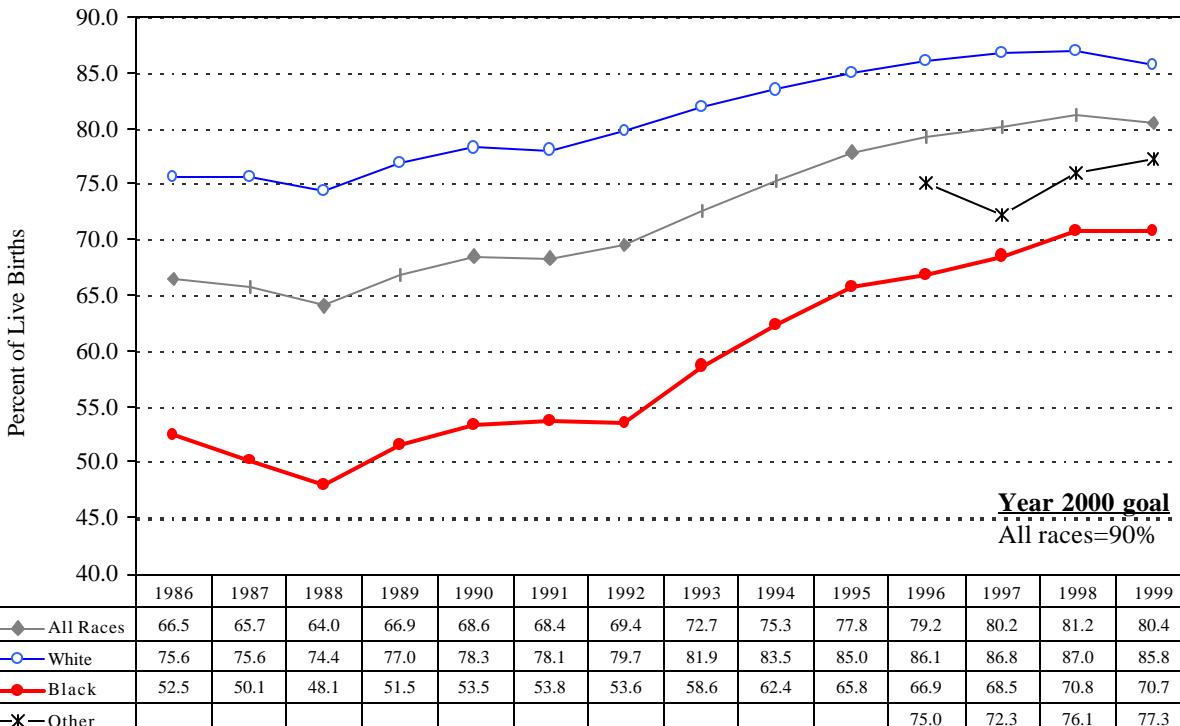

- SC has seen improvement in women receiving less than adequate prenatal care since 1985. The rate in 1985 was 40.2 compared to 26.1 in 1999. This represents a 35% change over the 1985 rate.
- Improvement has been observed in every racial/ethnic subgroup. In 1985, 31% of the State's White pregnant women received less than adequate prenatal care compared to 20.4% in 1999. This is a 34% improvement among pregnant White women in across the State. In 1985, 54.4% of Blacks and Others combined race pregnant women compares with 42.1% in 1995. This represents a 22.6% improvement. The rate for Blacks changed from 40.6% in 1996 to 36.2 in 1999 for an 11% drop. Improvement is also observed in the Other race group from 35.5% in 1996 to 30.5% in 1999, a 14% change. However, this rate has bounced and caution must be demonstrated due to small numbers. Finally, the trend lines indicate that the difference (gap) between White women and the Black and Other combined race group of women has been lessening since 1992.

Percent of Live Births Receiving Prenatal Care in First Trimester of Pregnancy

State of South Carolina

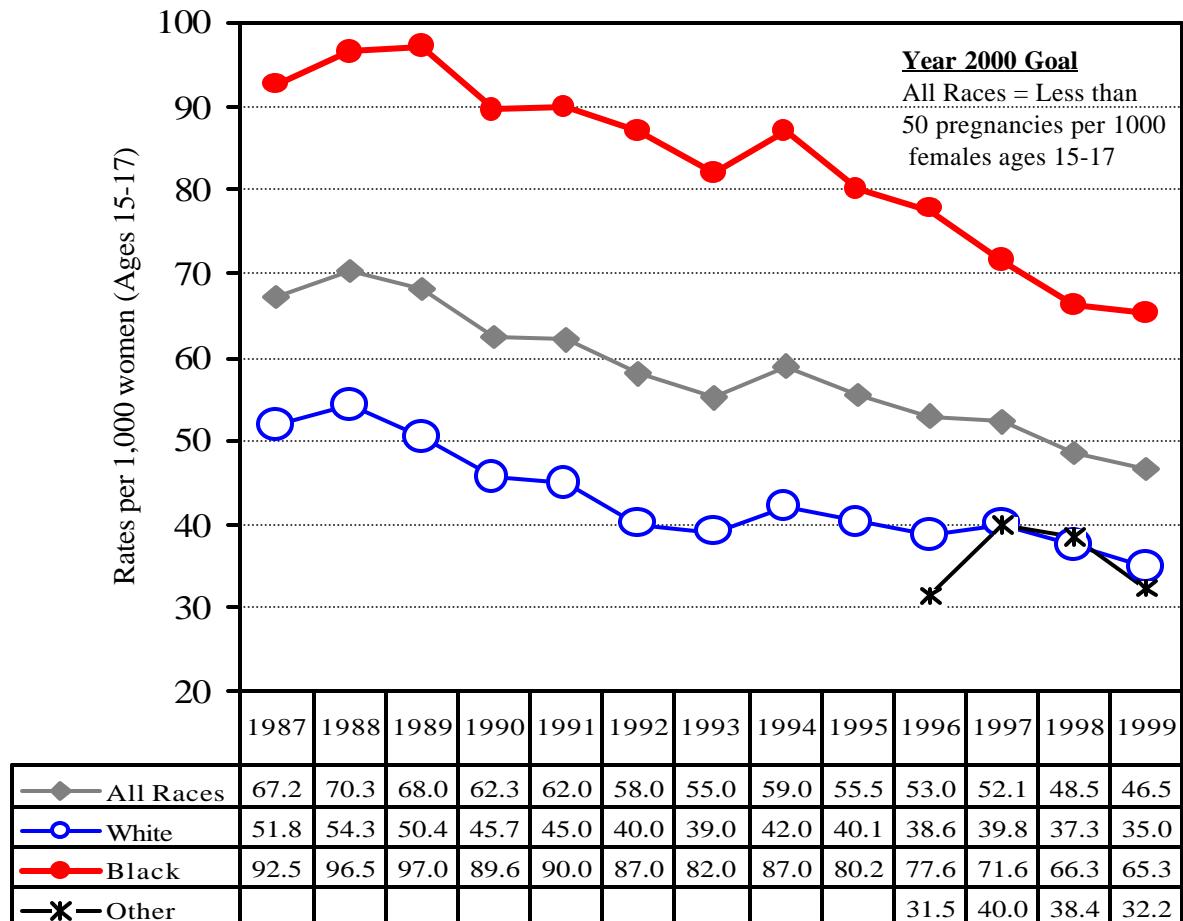

- Improvement in first trimester entry into prenatal care in SC has been longstanding and consistent. The rate in 1986 for all races was 66.5% of live births with known prenatal care status and climbed to 80.4 in 1999. This represents a 21% increase.
- During 1986 to 1998, improvement can be seen among all racial/ethnic subgroups. In 1986, 75.6% of white live births received prenatal care in the first trimester compared to 85.8% in 1999; this represents a 12% increase. The 1986 rate for Black and Other combined races was 52.5% and this increased to 65.8% in 1995 for a 20% increase.
- The gap between White live births and the Black and Other combined race group has lessened since 1992. The fluctuation involving the rates for the Other race group from 1996 to 1998 is likely the result of small numbers.

Teenage Pregnancy Rates (Ages 15-17)

State of South Carolina

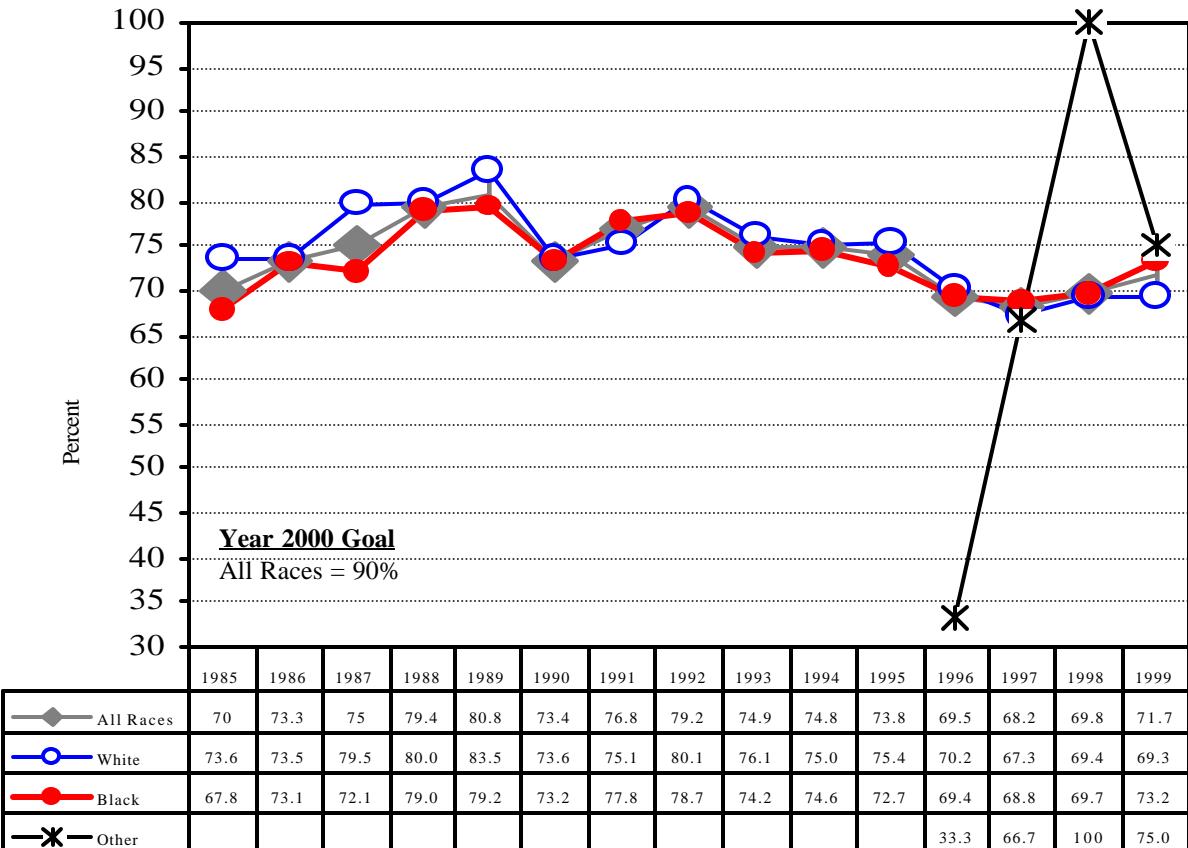

- ▶ Teenage pregnancies among 15-17 year old South Carolinian females have decreased from a rate of 67.2 per 1,000 in 1987 to 46.5 in 1999; a 31% decline.
- ▶ This success is also seen when viewing teen pregnancy by racial/ethnic subgroups. The rate for White 15-17 year old teens was 51.8 in 1987 and 35.0 in 1999, representing a 32% decline. The rate for Black and Others was 92.5 in 1987 and 80.2 in 1995, representing a 13% decline. The rate for Blacks was 77.6 in 1996 and 65.3 in 1999, representing a 16% decline. The rate for Others is the only exception to a consistent declining trend where the rate was 31.5 in 1996, peaked at 40.0 in 1997 and then is now on its way back down. This fluctuation may be due to small numbers and the trend for this subgroup requires further observation.

Percent of Very Low Weight Births Occurring in Level III Hospitals

State of South Carolina

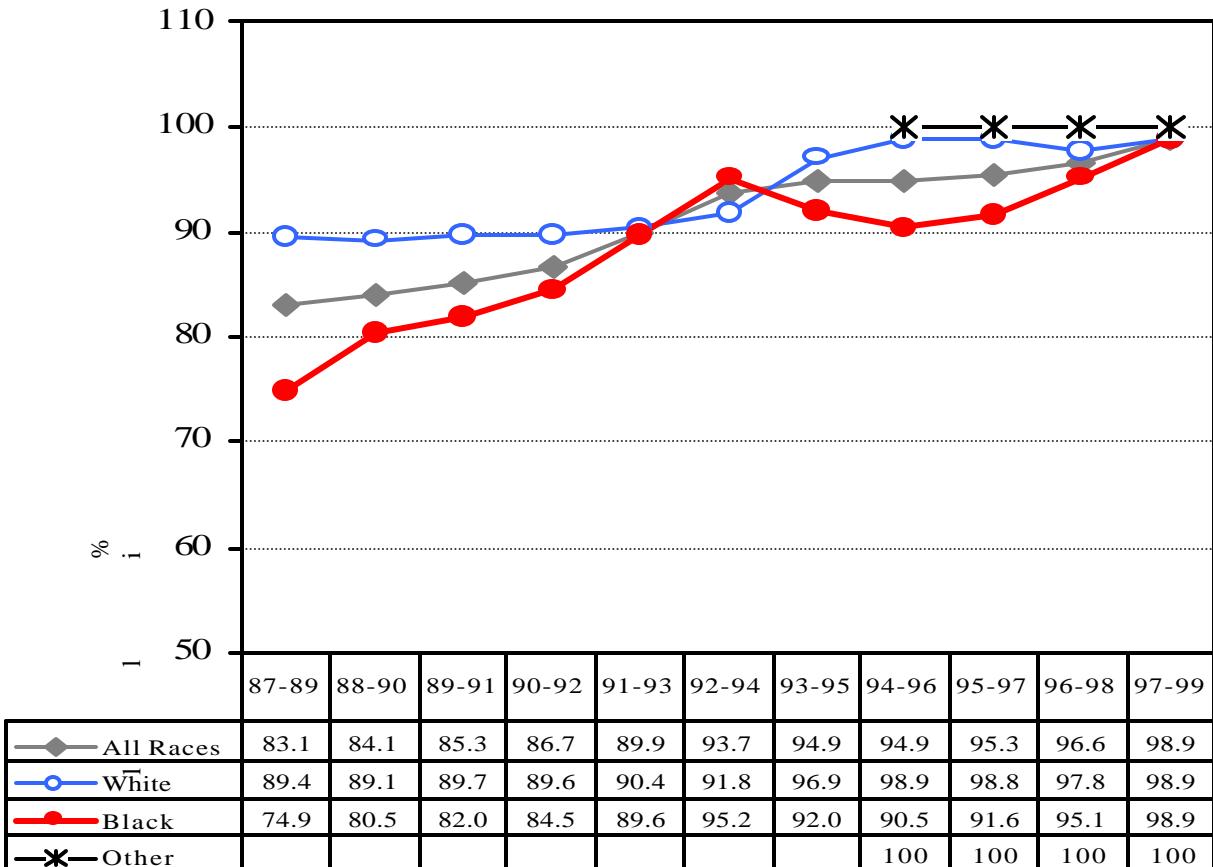

- There has been little variation and little change in the occurrence of very low weight births in Level III hospitals from 1985 to 1999. In 1985, 70% of the state's VLWBs occurred in a Level III hospital compared to 71.7% in 1998.
- More variation is observed when reviewing very low weight births in Level III hospitals by racial/ethnic subgroups. In 1985, 73.6% of White VLWBs occurred in a Level III hospital compared to 69.3% in 1999. Among the Black and Others subgroup, in 1985, a total of 67.8% of VLWBs occurred in a Level III hospital compared to 72.7% in 1995. Blacks have remained stable since 1996 with a slight increase in 1999. The sharp upward trend for Other Level III VLWBs over the 1996 to 1998 period and the sudden drop in 1999 appears to be the result of the small number of very low weight births.

Percent of Infant Deaths Due to Symptoms and Ill-Defined Conditions Having an Autopsy

State of South Carolina

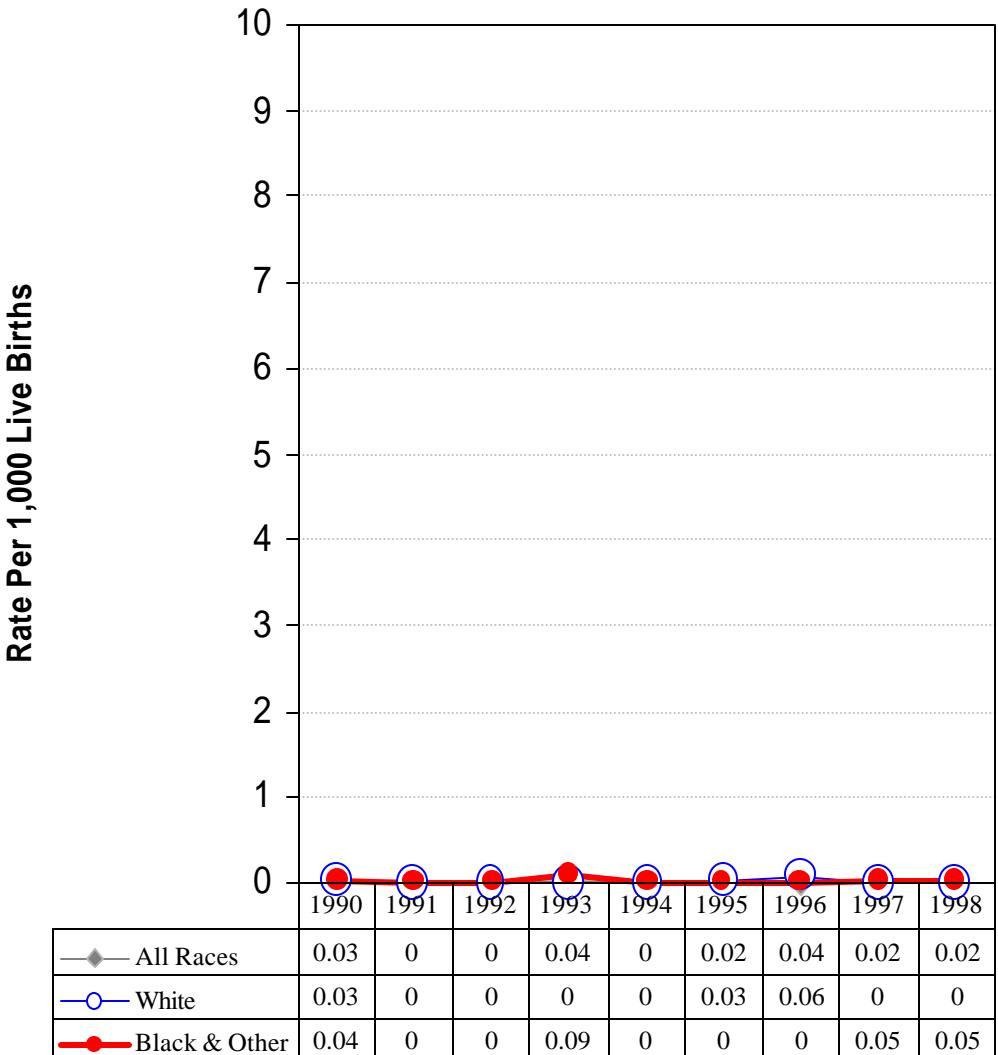

- The overall number of infant deaths due to symptoms and ill-defined conditions having an autopsy has increased from 83.1% in 1987-89 to 98.9% in 1997-99, representing a 16% increase.
- When reviewed by racial/ethnic subgroups, a similar improving trend is observed for both Whites and Blacks and Others. Whites increased from 89.4% to 98.9% from 1987-89 to 1997-99, representing a 9% increase. Blacks and Others saw an increase from 74.9% (in 1987-89) to 92.0% (in 1993-95), representing a 19% increase. In 1997-99 there is no longer a difference (gap) among the White, Black and All Races categories.

Note: The trend line labeled Black, represents Black & Others from 1983-85 to 1993-95. However, in 1994-96, Other races were analyzed separately, thus the trend line at this point represents only Blacks. Please see the new and separate line reflecting the new population subgroup - "Others" beginning in 1994-96.

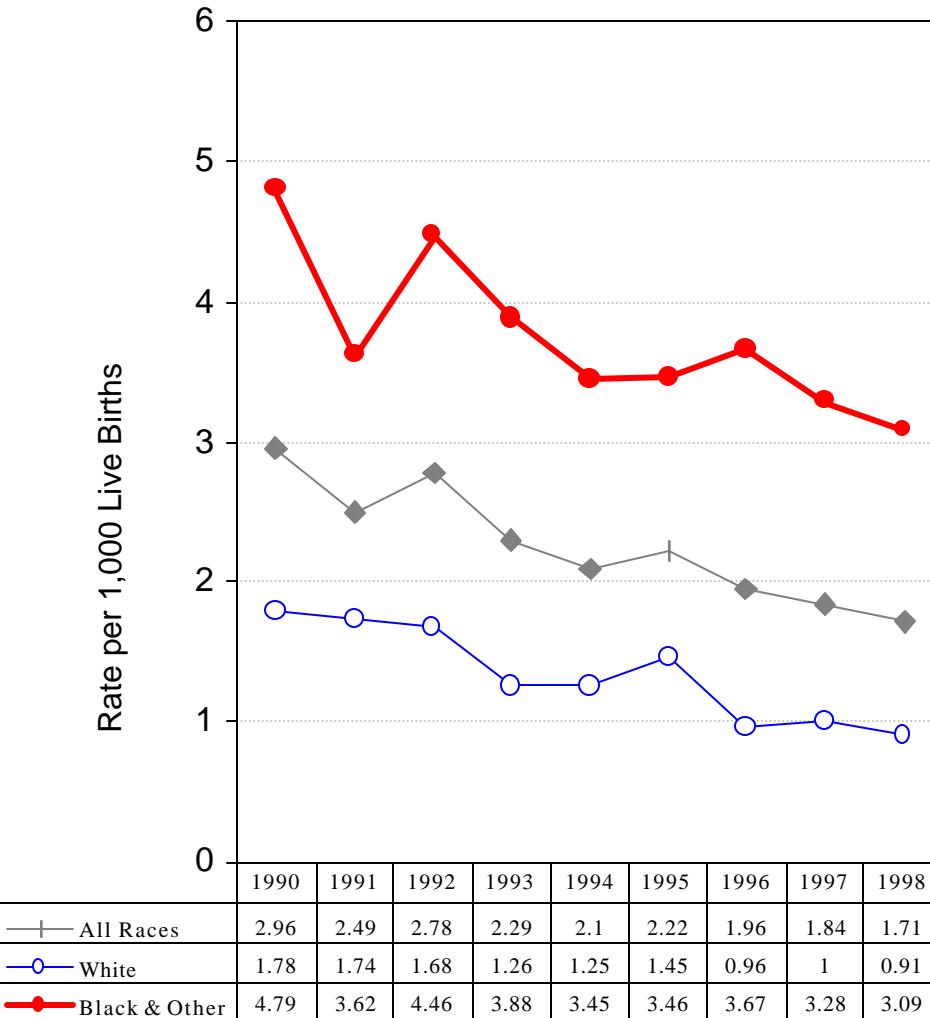

Low Birth Weight (1500 - 2499 Grams)

- From 1990 through 1998, of the 35,871 infants born in this weight category, only nine died from conditions directly associated with prematurity and low birth weight. Infants born in this low birth weight category typically have very good chances of survival.
- The nine infants who died during this time period represent 0.5% of all low birth weight (< 2500 g) deaths.

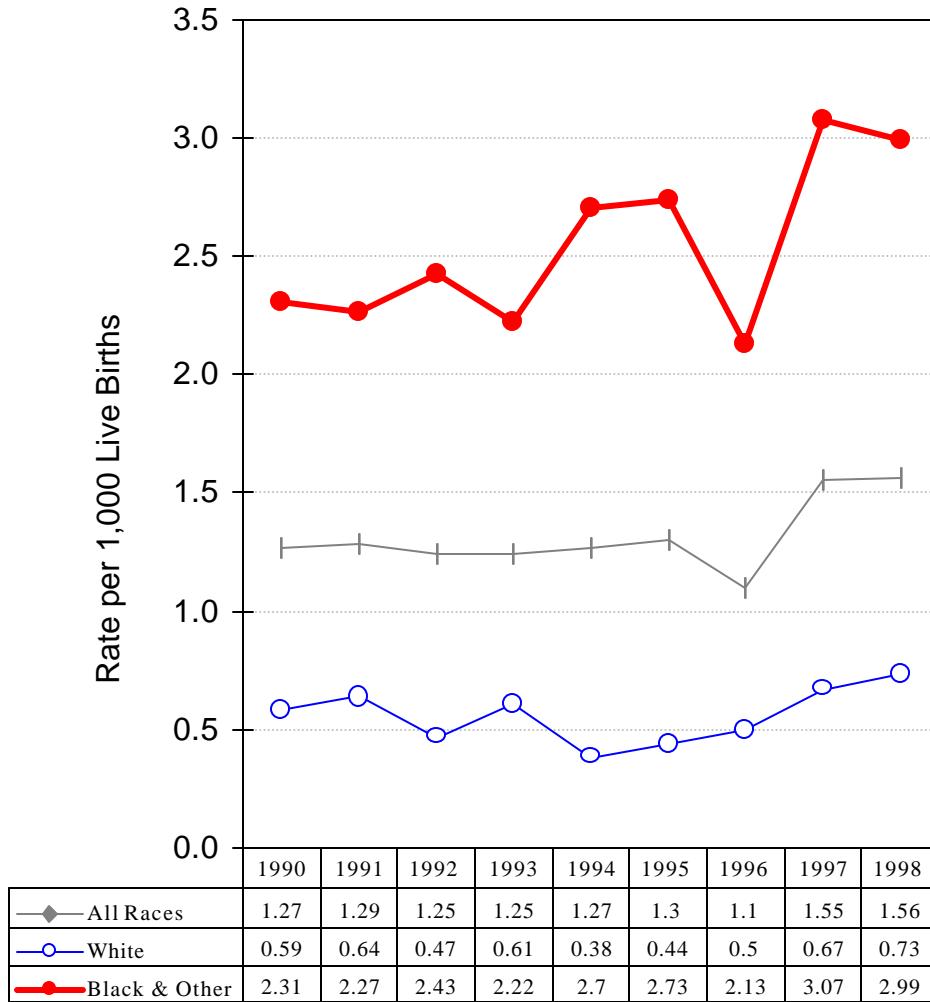

Very Low Birth Weight (500 - 1499 Grams)

- From 1990 through 1998, 1,105 infants died in this particular weight range from conditions associated with prematurity and low birth weight. These represented 63% of all low birth weight (< 2500 g) deaths.
- Although the disadvantage for nonwhite infants has remained steady through this time period, significant reductions in mortality in this weight range can clearly be seen for both racial groups.
- The very low birth weight mortality rate for all races combined decreased by 42% during this nine-year period.

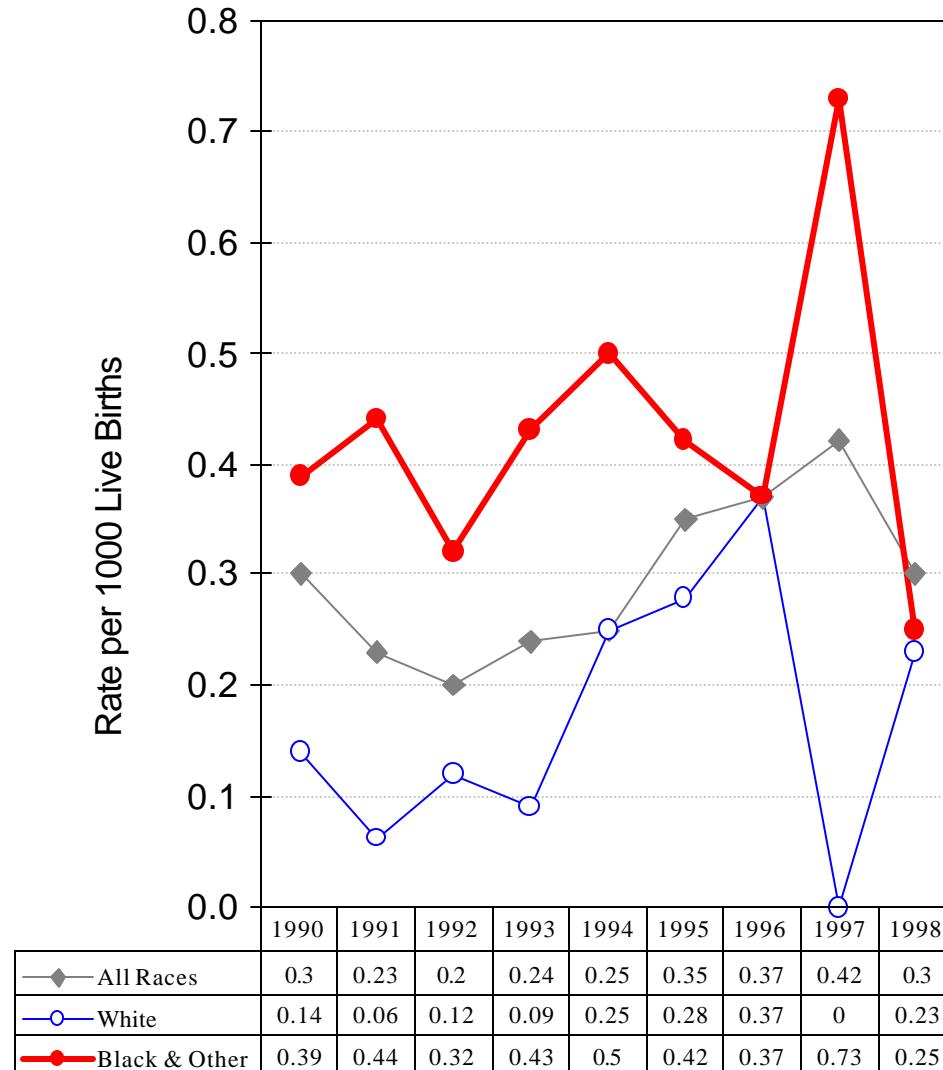

Extremely Low Birth Weight (< 500 Grams)

- During this time period, a total of 638 live born infants who were born in this weight category died.
- For all races, the number of deaths associated with this category (< 500 grams) ranged from 56 in 1996 to 84 in 1998.
- Black and Other infants represented between 70% and 80% of these deaths.
- Though no clear trends are present throughout the entire time period, some evidence of an increase can be seen for whites from 1994 through 1998.

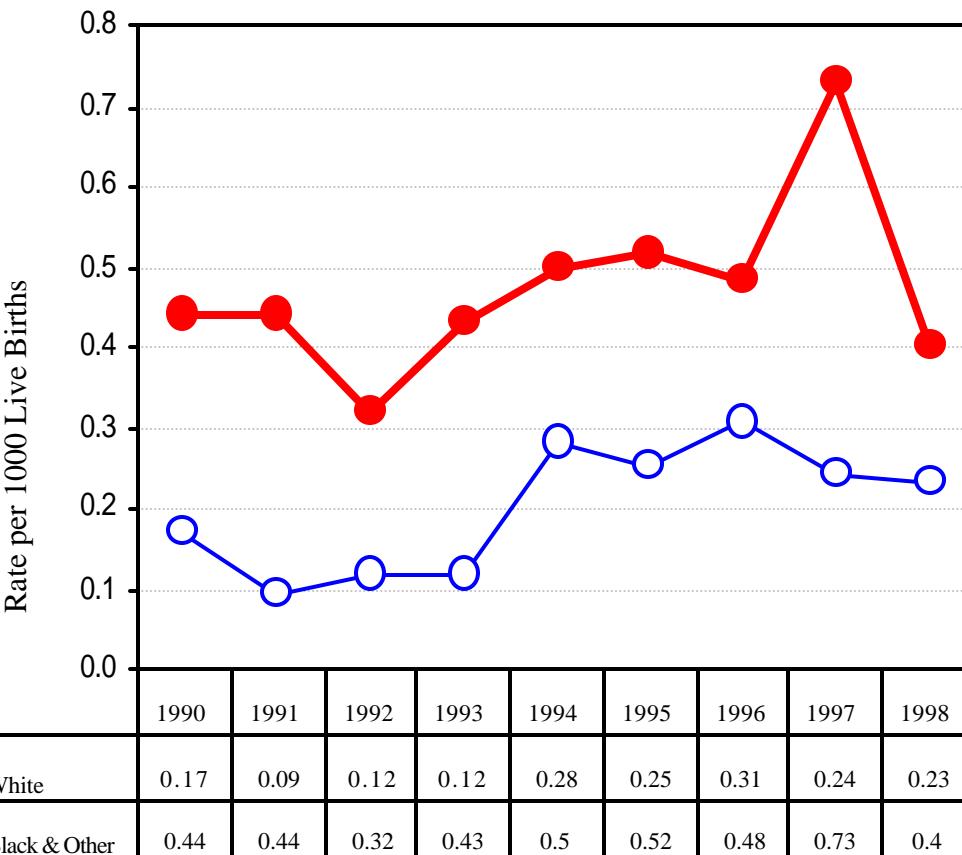

Injuries, Unintentional and Intentional

- Deaths in this category ranged from 16 in 1992 to 28 in 1996, with an average of 22 per year.
- Mortality rates for all races combined in this category showed an increasing trend from 1992 through 1997.
- With the exception of 1996 and 1998, mortality rates for black & other infants were higher than those for white infants.

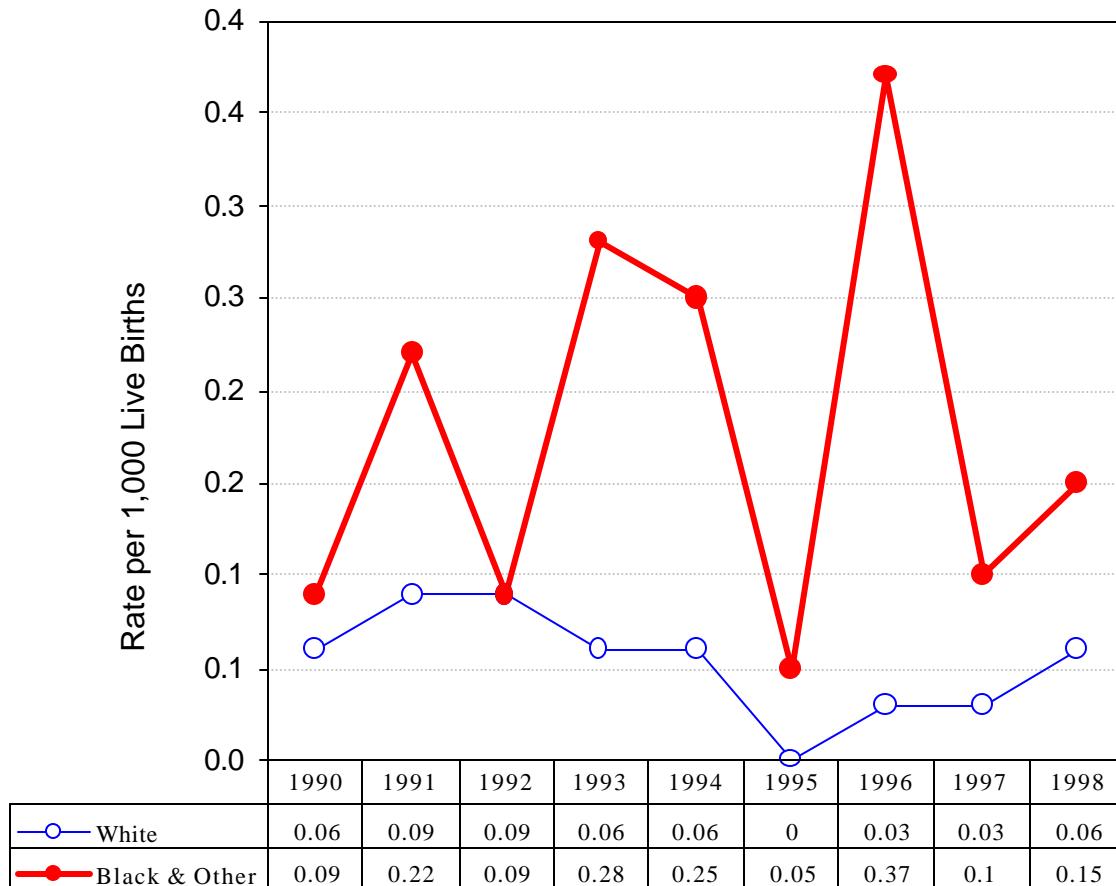

Death Rates from Unintentional Injuries

- South Carolina experiences an average of 16 infant deaths per year from unintentional injuries (accidents); 95% of these occur in the postneonatal period.
- Mortality rates from unintentional injuries are consistently higher for nonwhite infants than for white infants.
- An increasing trend in injury-related mortality rates occurred between 1992 and 1997 for nonwhite infants, and between 1991 and 1996 for white infants.

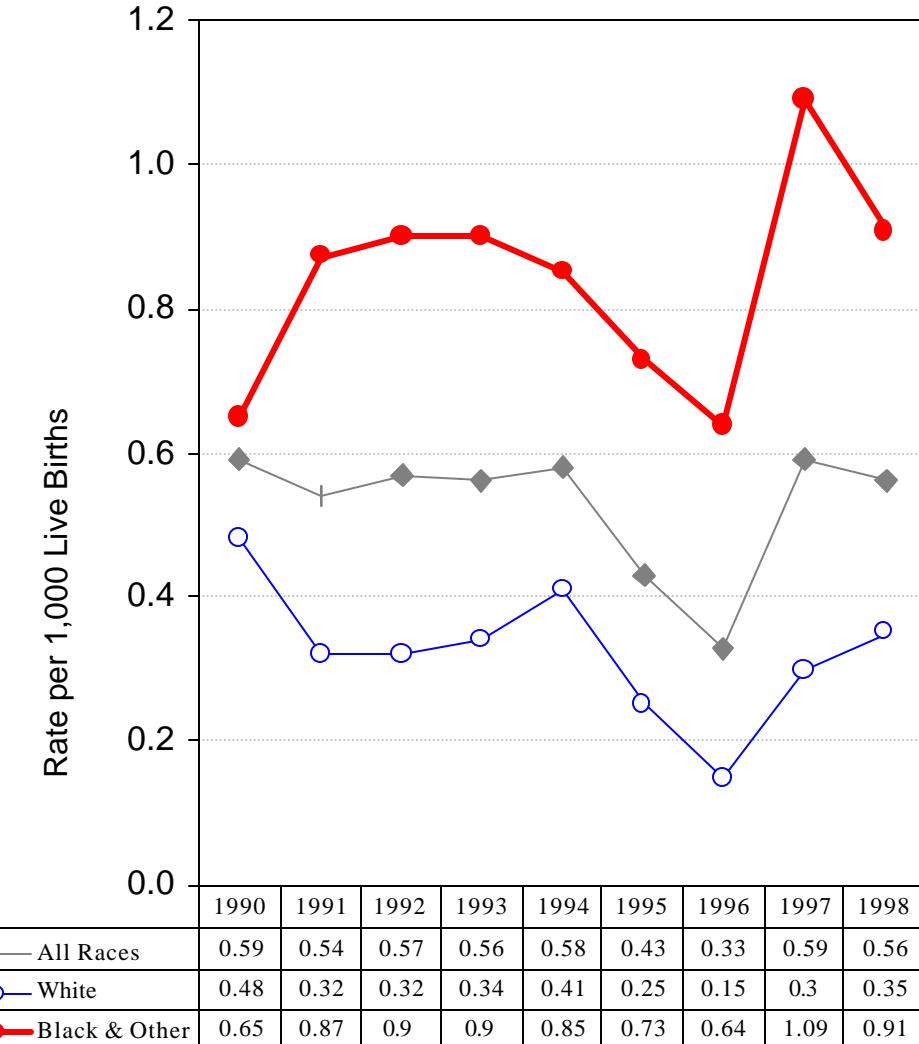

Death Rates from Intentional Injuries

- Since 1990, approximately 5 infants have died each year from intentional injuries (homicide).
- This chart shows a more erratic trend for nonwhite than for white infants.

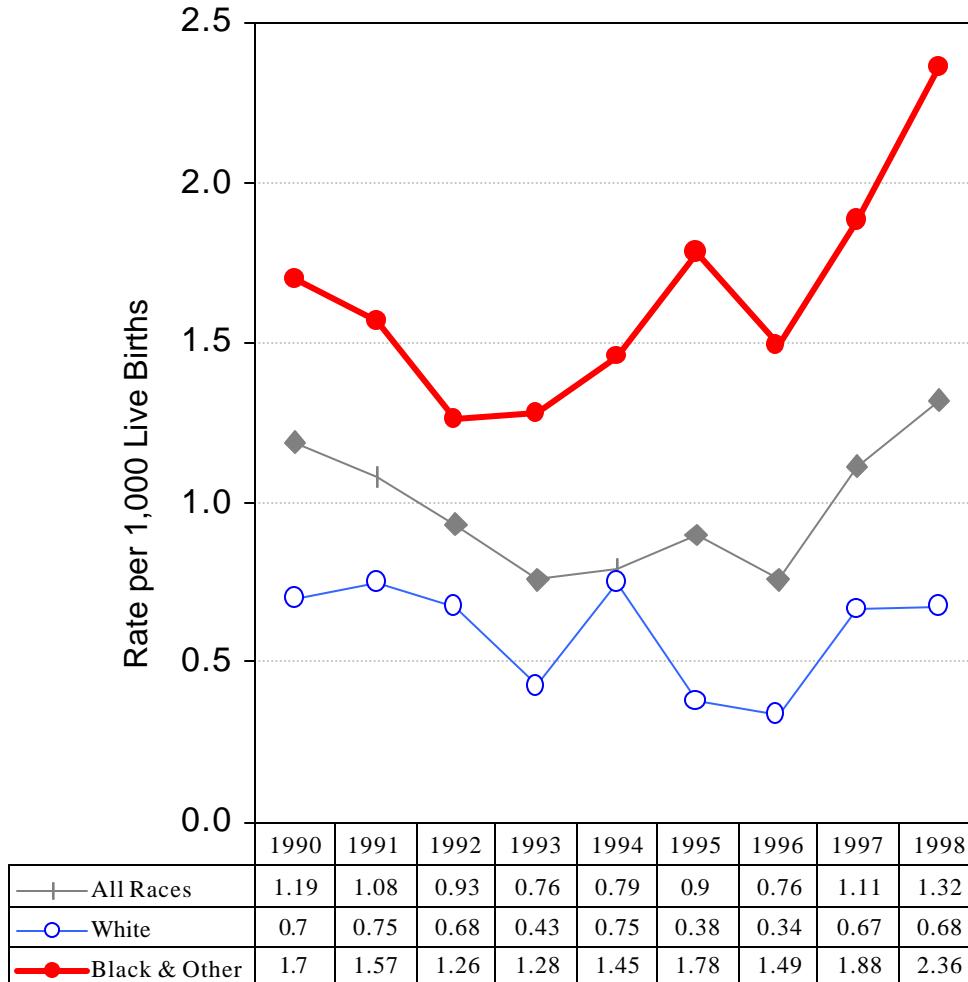

Infections

- During the time period shown here, between 30 and 32 infant deaths were attributable to infections each year. Nearly one-half of these (47%) were classified as “Infections Specific to the Perinatal Period” and included such conditions as clostridia, E. coli, and neonatal urinary tract infections, intrauterine sepsis, and septicemia of newborn. Septicemia *per se* comprised the next largest (20%) group of deaths due to infections, followed by septic colitis, enteritis, gastritis (8%), other mycoses (5%), and strep, staph, & other infectious bacterial infections (4%).
- Racial differences in deaths in this category were pronounced, but mortality rates for both races spiked in 1997 and remained high in 1998.

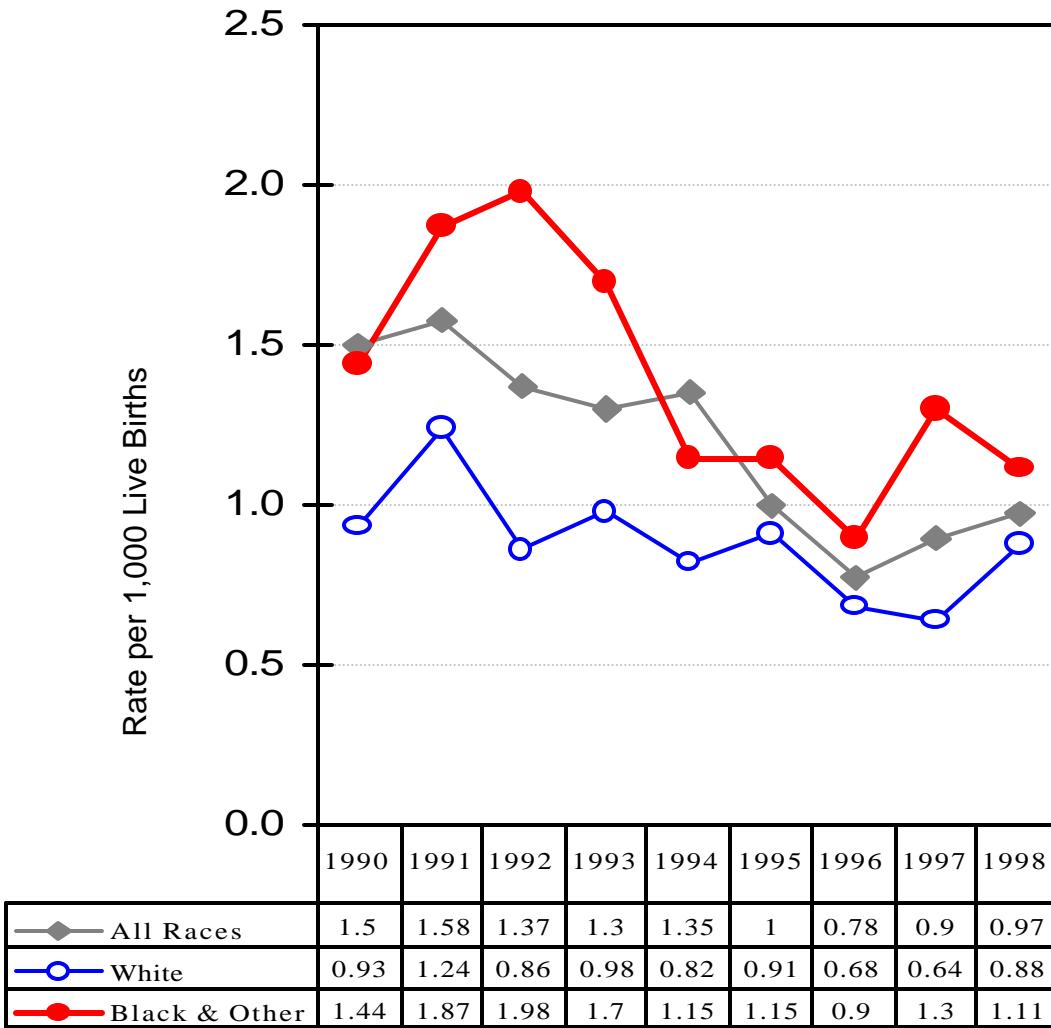

Adverse Maternal Conditions

- ▶ The number of deaths in this category ranged from 41 in 1993 to 71 in 1998.
- ▶ Causes of death in this category included maternal complications or pregnancy (59%), complications of placenta, cord, and membranes (30%), pre-existing maternal conditions (9%), and complications of labor and delivery (2%).
- ▶ Since 1992, deaths attributable to these causes have increased significantly among nonwhite infants. In 1998 the nonwhite mortality rate for this category was 3.5 times higher than the white rate.

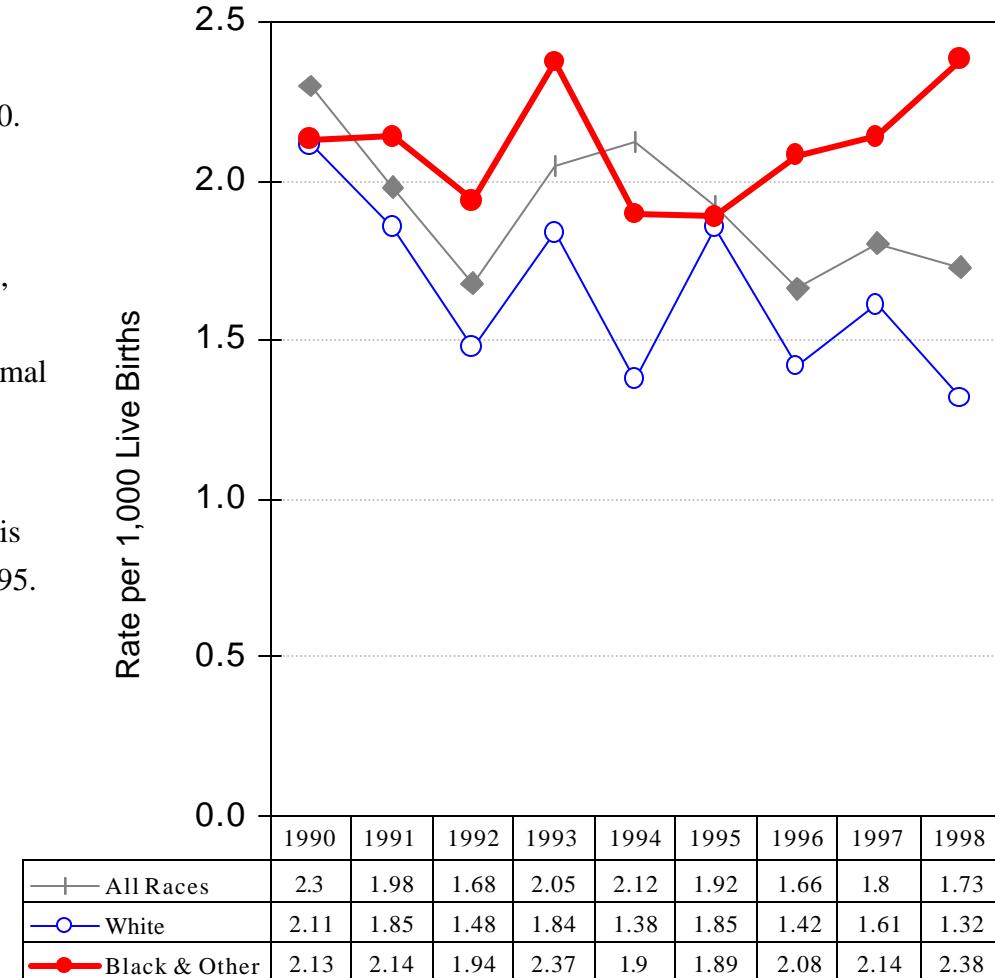

Sudden Infant Death Syndrome

- ▶ The number of deaths from SIDS ranged from 40 in 1996 to 91 in 1991.
- ▶ Significant reductions in mortality rates from this cause occurred from 1991 through 1996 for all races. The declining mortality rate was most pronounced for nonwhite infants.
- ▶ This decline coincided in time with the public health educational “Back to Sleep” initiative in which mothers were advised that putting infants to sleep on their backs has been shown to reduce the risk of Sudden Infant Death Syndrome.

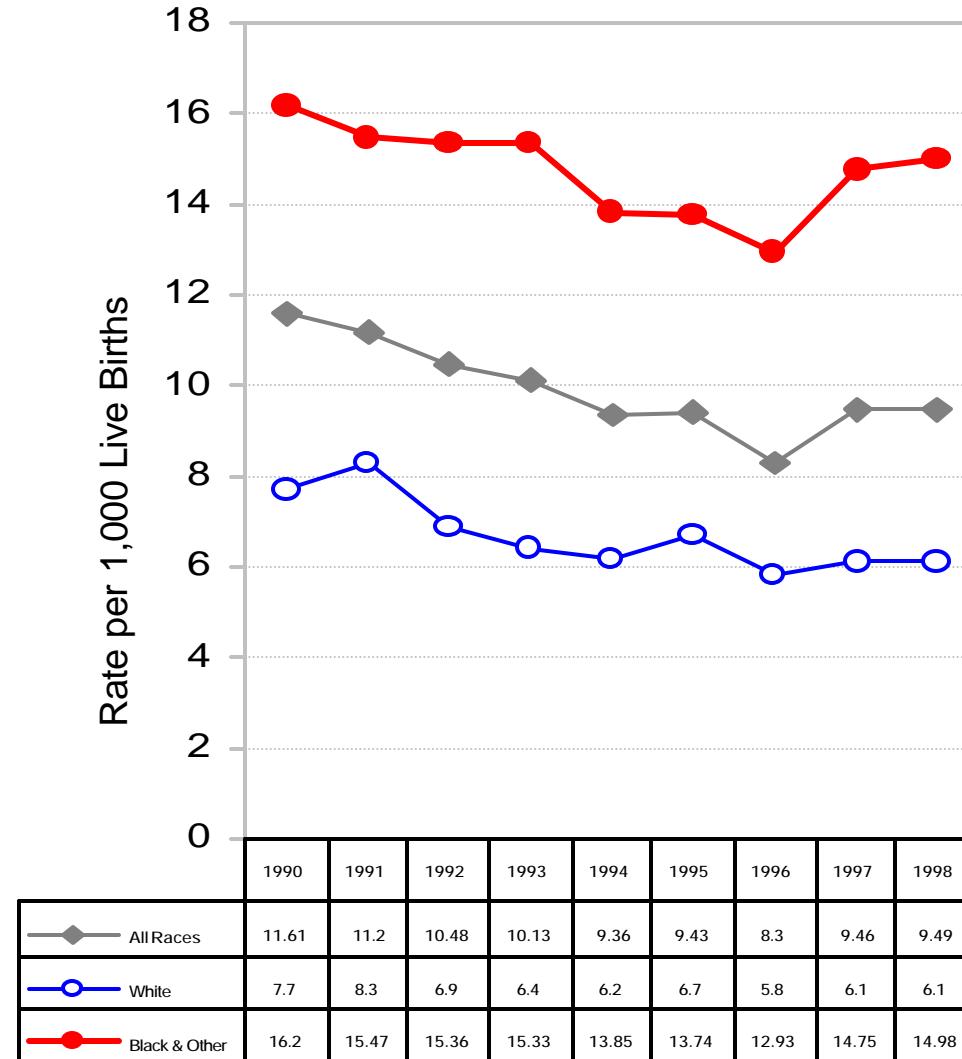

Lethal Congenital Anomalies

- ▶ The number of deaths from lethal congenital anomalies ranged from 84 in 1994 to 124 in 1990.
- ▶ Cardiovascular system anomalies accounted for approximately 31% of all deaths in this category, followed by anomalies of the respiratory system (18%), neural tube defects (14%), and chromosomal anomalies (12%).
- ▶ For black & other infants the mortality rate in this category has shown an increasing trend since 1995.

Deaths from All Causes

- The total number of infant deaths ranged from 424 in 1996 to 679 in 1990.
- Infant mortality rates decreased by 18% for all races combined from 1990 to 1998.
- During this time period, the white rate decreased by 20%, the black and other, by 8%.

AIMv2: Accelerated Immunization Module report generated from SCDHEC PATS computer system.

*Columns all counted as patients with delinquent immunization.

**CCHD includes data from the Downtown and Ravenel Clinics.

**CCHD includes data from James Island effective March 2000.

***Summerville data includes Ridgeville Clinic.

**** Anderson did not report for this month per their DHD order.

Those counties showing zeros and ERR in all columns are in transition or report not received by due date for AIMv2.
